PURPOSE OF THE COURSE

The purpose of this course is to enable the student to acquire sufficient knowledge of monetary theory and policy. The course content is designed to ensure that the state of the art of monetary theory is given sufficient exposition, while at the same time introducing sufficient doses of policy and empirical topics with special reference to developing countries, in particular African countries. The course adequately prepares the student for advanced research and practice in the area plus policy analysis and implementation.

COURSE PREREQUISITES

The student must be familiar with Macroeconomics at the undergraduate level.

STRUCTURE OF THE COURSE

The course is divided into Part I and Part II. Part I deals with issues relating to various aspects of monetary theory including the role of money, money demand, money supply, money and inflation, monetary management and central banking. Part II covers the economics of financial institutions and financial intermediation, relationship between financial development and economic growth, money in an open economy, international financial institutions and global economy.

GRADING

As in other courses of the Master degree programme, coursework (take-home exercises/papers, class discussions, and in-class tests) will comprise 40 per cent and the final examination 60 per cent of the final grade for each course.

READING LIST

No single textbook will be adequate for the course. A number of basic texts, some of which are substitutes with respect to specific topics, have therefore been suggested. Also references will be made to articles and books.
